MSc Remote Sensing and Geoinformatics - Winter semester information

Dear students on the MSc Remote Sensing and Geoinformatics,

This is an early welcome to the upcoming winter semester - good to have you as our students! We have now put together the course schedule. Given the continuing pandemic, KIT has opted for a 'Digital semester 2.0': In the winter semester, all core courses of the Remote Sensing and Geoinformatics programme will be held in online formats not requiring physical presence. Some elective courses outside the core curriculum, or the third-semester lab rotations may require students to be present physically, however - if this applies to you, please inquire directly with the respective lecturers.

If you are planning to study on the MSc programme in the winter semester, please kindly send a brief message with your name and email address to me at jan.cermak@kit.edu, so we may contact you directly with further information in the future.

After the positive impressions of online learning the past summer semester, I am very much looking forward to a successful and enjoyable winter semester!

Yours sincerely,

Prof. Dr. Jan Cermak, Dean of Studies
